Tailscale

BurpSuite

Python

Gemini API

Bash

Docker

To Whom It May Concern,

I am writing to express my strong interest in senior-level Information Security and Cloud Architecture roles. Over the past 6 years, I have successfully scaled enterprise cloud environments across GCP, Azure, and AWS, specializing in Zero-Trust architectures and security automation.

Beyond technical execution, my core strength lies in translating complex security requirements into actionable business outcomes. I have a proven track record of leading cross-functional engineering teams, guiding organizations through rigorous compliance audits, and fostering a culture of security-first development without compromising deployment velocity.

Rather than repeating my resume, here are a few key highlights of my technical achievements:

Gemini Spark

Master everyday life with AI. My autonomous personal operating system orchestrating routine logistics and administrative workflows.

GCP Zero-Trust Architecture

Production-grade PAM framework and VPN-to-Tailscale migration defined as IaC.

Internal VAPT AI Workflow

AI-assisted methodology for replicating vulnerabilities, re-rating CVSS, and producing reports.

Automated Compliance Auditor

LLM-powered platform to monitor ISO 27001/SOC 2 and auto-answer vendor questionnaires.

Supply Chain Security

Org-wide dependency auditing, CVE remediation, and CI/CD security pipelines.

DevFlowBot (AI PR Agent)

Autonomous agent for automating frontend workflows with human-in-the-loop QA gates.

Sincerely,

Chinmay Dhok
